Projects

- **RoadHow RN SDK Development**
  This is just an NPM library for RoadHow application in which api's and components were added into the npm library for users to import it into their RN projects.

- **The Pinter App (Mobile App)**
  This App is used to Track the brewing of pinter device and to customize the stages. It has instructional videos and community page to share their feeds and learn new ways to feed. It also had an option to shop various products sold by Pinter team.

- **TazWiz Mobile App**
  This App is for Teachers and Learners to provide training. Built in React-Native, Firebase Auth, MongoDB, Heroku for iOS, and Android.

- **Vegitone Mobile App**
  This App is regarding tracking company vehicles, track their shifts, logging their attendance and locate them. Built in React-Native, WebSocket, MongoDB for iOS and Android.

- **Gtrack (by Vegitone)**
  This App is the extension of previous app to track the live location of those vehicles, grouping them, geo-tracking and many more features. Built in React-Native, MongoDB, WebSocket, TraccarApi for iOS and Android.

- **Prashnottar**
  This app, I had created to learn the basic functionality of Android Studio. It is basically a clone of StackOverflow. Built in Android Studio, Firebase Auth, Firebase Realtime DB for Android.

- **Wed Made Planner**
  This is an ASP.net based application which includes modules to find vendors based on their work, reviews, inspiration, ideas, cost, and ratings. This was created for University Project.
